page 1 of 9

- 1 Introduction
 - 1.1 Some subsection

The proof uses reductio ad absurdum.

Theorem

There is no largest prime number.

1. Suppose p were the largest prime number.

4. But q + 1 is greater than 1, thus divisible by some prime number not in the first p numbers.

The proof uses *reductio* ad absurdum.

Theorem

There is no largest prime number.

- 1. Suppose p were the largest prime number.
- 2. Let q be the product of the first p numbers.
- 4. But q + 1 is greater than 1, thus divisible by some prime number not in the first p numbers.

The proof uses reductio ad absurdum.

Theorem

There is no largest prime number.

- 1. Suppose p were the largest prime number.
- 2. Let q be the product of the first p numbers.
- 3. Then q + 1 is not divisible by any of them.
- 4. But q + 1 is greater than 1, thus divisible by some prime number not in the first p numbers.
